blo.kart®

Katalyst - blokart edition

You've seen the blokart revolutionize the sport of land sailing and give traditional ice karts a run for their money.

Now experience blokart sailing on the water - this ultimate accessory will take your blokart experience to the next level!

Keeping true to the blokart ethos of; fun, fast and compact. Sitting in a 'deck-chair' facing forward, steering with a handlebar powered by a safe, forgiving rig (difficult to capsized)..... recreational sailing has never been easier.

- no trailer required (unlike other water craft)
- easy home storage
- simple transportation
- fast assembly

The Package Includes

A pair of Hulls

These high performance custom designed fibre glass hulls have been developed and tested by the experienced team of boat designers at Katalyst MarineLtd. Each hand crafted Hull is 3.3m long with a volume of approximately 200L, with a water tight hatch that allows you to store all the other componets inside when packed down. The starboard hull includes a steering cable complete with a steering quadrant to replace the blokart front fork to facilitate handle bar steering.

Spars

Custom designed extruded aluminium spars fore and aft connect the two hulls and provide a rigid platform to mount your blokart onto. A couple of stainless steel fore struts combine with your blokart struts to triangulate the hulls to increase rigidity.

Steering Set

A pair of durable custom designed injection molded kick-up rudders complete with a fibre glass tiller, connect to the steering cable to provide simple handle bar steering.

TESTIMONIAL: *'Now I can keep sailing when the tide comes in'*
Jono Craig, NZ

Extra Accessories

Beach Trolley

Assemble the Katalyst where you park and single handedly wheel it down to the water. The trolley packs down into your rudder bag and can be stowed inside the hull while sailing. Use your existing blokart wheels with the trolley or get the bushed beach wheels (no bearings so no worries about water damage).

Roof Rack Mount

Simply clamps onto your existing roof rack and keys into the hulls and secure with tri-knobs the same way the spars do, no tie-downs required. Available in one and two boat options.

Shallow Draft Rudders

Are you going to be sailing in shallow water? The shallow draft rudder gives you increased rudder surface with reduced draft, sail in 0.5m of water.
