

## "New" Pod Windscreen

November 2011

You will notice a small change with the windscreen on the blokart POD to allow a little more clearance between the mast base and the wind screen.

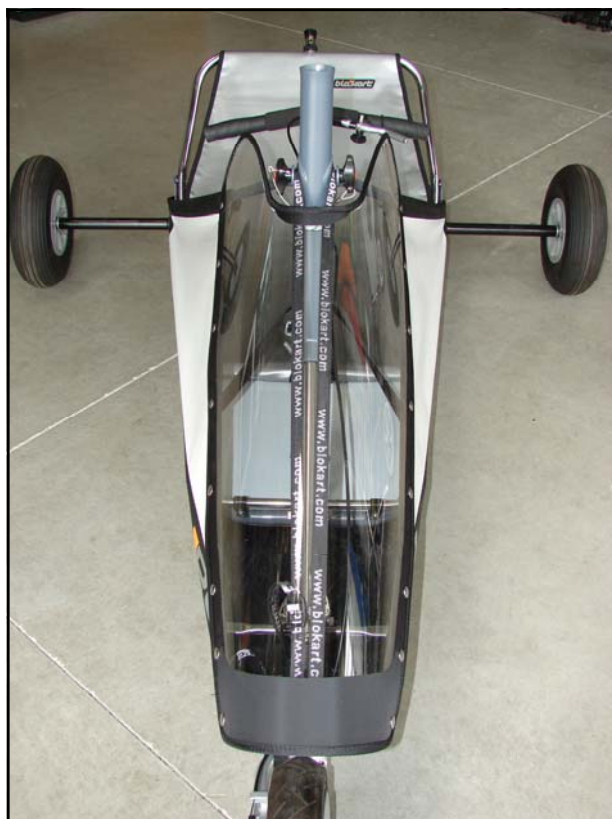

If the Pod skin is tensioned back too much the windscreen can press hard against the mast base and develop a small bend which sometimes results in a crack after continual vibration when sailing. The solution is to increase the size of the mastbase cut-out on the Pod windscreen to ensure a little clearance between the windscreen and the mastbase.

Pod's will be supplied with a blokart Multi Strap which when tensioned between the Pod nose frame and the mast base will ensure a nice shape to the Pod lifting the windscreen and flattening out the side walls.

The strap helps maintain tension of the Pod skin and also keeps the nose of the Pod well away from the front tire, especially when using the Big Foot.

Fitting instructions provided.

*Note: The Multi straps are legal within the IBRA one design rules and are also excellent for condensing your sail quiver bag and blokart bag for storage and travel.*

### **blokart Pod includes:**

- Pod Skin & bungees
- Windscreen
- Tension strap
- Polished Stainless steel Nose Frame
- Pod bag
