# blo.kart®

**New Product Introduction**

## **blokart® Comp**

blokart enters a new era with the introduction of a new tough model. With a strong Cr-Mo chassis the Comp takes rugged to an entirely new level, engineered specifically for customers who play in extreme environments and appreciate the value of dependable tools that perform as promised.

The Cr-Mo chassis is stronger than stainless steel, so unless they are frequently sailing on the beach/salt our heavier punters would be much better with a Comp.

Pro - Although Cr-Mo is less corrosive than high-strength steel the paint finish will require the odd 'touch-up' when scratched or 'sand-blasted'. The stainless steel Pro kart is recommended for beach sailing.

Note: the Sport Model will be discontinued

	<b>Comp</b>	<b>Pro (unchanged)</b>
